

Scenario:

You are a college student at the University of South Carolina. You like to go out to eat with your friends and family on occasion. You don't like having to ask the waiter for multiple checks because it is such an inconvenience for them, and you also hate trying to do the math and individually venmo or cashapp one person for the whole meal.

Task 1: Successfully split one check among five of your friends.

Task 2: Add three new friends to your friends list.

Task 3: Rate the Blue Marlin Restaurant a 10/10 and leave a nice comment.

Notes:

Changes that should be made:

- Add a back or cancel button to the add friends page.

- Change rating system from being out of 10 points to being out of 5 stars so it is more visually appealing.

- Make the app confirm every price on the receipt with you before letting the transaction go through.

Need to keep the same:

- Method of transaction through venmo/cashapp

- Selecting friends to add to check from a list

- Easy to use interface going page by page
